Non-IFRS Financial Measures

We report certain financial information using non-IFRS financial measures, as we believe that these measures provide information that is useful to investors in understanding our performance and facilitate a comparison of our quarterly and full year results from period to period. These non-IFRS financial measures do not have any standardized meaning and may not be comparable with similar measures used by other companies. For certain non-IFRS financial measures, there are no directly comparable amounts under IFRS. These non-IFRS financial measures should not be viewed in isolation from or as alternatives to measures of financial performance determined in accordance with IFRS. Additional information concerning non-IFRS financial measures and, if applicable, reconciliations to the closest IFRS measures are available in the Q2'26 MD&A under the heading N - Non-IFRS Financial Measures and the Supplementary Financial Information packages that are available on www.sunlife.com under Investors – Financial results and reports.

1. Underlying Net Income and Underlying EPS

Underlying net income is a non-IFRS financial measure that assists in understanding Sun Life's business performance by making certain adjustments to IFRS income. Underlying net income, along with common shareholders' net income (Reported net income), is used as a basis for management planning, and is also a key measure in our employee incentive compensation programs. This measure reflects management's view of the underlying business performance of the company and long-term earnings potential. For example, due to the longer term nature of our individual protection businesses, market movements related to interest rates, equity markets and investment properties can have a significant impact on reported net income in the reporting period. However, these impacts are not necessarily realized, and may never be realized, if markets move in the opposite direction in subsequent periods or in the case of interest rates, the fixed income investment is held to maturity.

Underlying net income removes the impact of the following items from reported net income:

- Market-related impacts reflecting the after-tax difference in actual versus expected market movements
- Assumptions changes and management actions
- Other adjustments:
 - i) MFS shares owned by management
 - ii) Acquisition, integration, and restructuring
 - iii) Intangible asset amortization
 - iv) Other items that are unusual or exceptional in nature

For more details about the adjustments removed from reported net income to arrive at underlying net income, see section N - Non-IFRS Financial Measures - 2 - Underlying Net Income and Underlying EPS in the Q2'26 MD&A.

The following table sets out the post-tax amounts that were excluded from our underlying net income (loss) and underlying EPS and provides a reconciliation to our reported net income and EPS based on IFRS.
