Sun Life Financial Inc.

Type of Engagement: Annual Review
Date: March 9, 2023
Engagement Team:
Amala Devi, amala.devi@sustainalytics.com, (+1) 416 861 0403
Lokesh Jain, lokesh.jain@sustainalytics.com

Introduction

In August 2019, Sun Life Financial Inc. (Sun Life) issued a CAD 750 million Series 2019-1 Subordinated Unsecured 2.38% Fixed/Floating Debentures due 2029 (the "2019 Sustainability Bond"), aimed at financing a variety of green and socially impactful projects. Sustainalytics provided a second-party opinion¹ on the Sun Life Sustainability Bond Framework (the "Framework") in March 2019.²

In March 2023, Sun Life engaged Sustainalytics to review the projects financed with proceeds from the 2019 Sustainability Bond and provide an assessment as to whether the projects met the use of proceeds criteria and the reporting commitments outlined in the Framework.

Evaluation Criteria

Sustainalytics evaluated the projects funded with proceeds from the 2019 Sustainability Bond based on whether the projects:

1. Met the use of proceeds and eligibility criteria outlined in the Framework; and
2. Reported on at least one key performance indicator (KPI) for each use of proceeds category defined in the Framework.

Table 1: Use of Proceeds Category, Eligibility Criteria and Associated KPIs

<table>
<thead>
<tr>
<th>Use of Proceeds</th>
<th>Eligibility Criteria</th>
<th>Key performance indicators (KPIs)</th>
</tr>
</thead>
</table>
| Renewable energy | Investments in facilities and equipment dedicated to generation, transmission and distribution of energy from renewable sources, including: i. Wind  
ii. Solar  
iii. Geothermal  
iv. Hydro (run of river, small scale <25MW, upgrades of existing facilities or other hydro facilities subject to an ESG assessment)³  
v. Biomass (waste or other non-food feedstock that does not deplete existing terrestrial carbon pools) | • Tonnes of greenhouse gas (GHG) emissions reduced/avoided annually (measured in tonnes of CO₂ equivalent)                                                                                                       |
| Energy efficiency| Investments in facilities and equipment that reduce energy consumption or improve the efficiency of resources, including: i. Installation of energy efficient heating, ventilation, air conditioning, refrigeration, lighting and electrical equipment | • Tonnes of greenhouse gas (GHG) emissions reduced/avoided annually (measured in tonnes of CO₂ equivalent)                                                                                                       |

³ To determine if other hydroelectricity facilities > 25 MW constitute an Eligible Asset, Sun Life will assess the investment relative to Sun Life’s Environmental, Social and Governance (“ESG”) framework. This ESG assessment will include the location, size and any other relevant environmental and social risk factors related to the hydroelectricity facility. Sun Life’s ESG assessment will be subject to review by a qualified third party.
### Green buildings
Investments in new or existing commercial or residential buildings that have received, or expect to receive based on its design, construction and operational plans, certification according to third party verified green building standards, or energy ratings such as:

- LEED: Platinum or Gold
- Other equivalent certification schemes, such as BOMA BEST, ENERGY STAR

- Tonnes of greenhouse gas (GHG) emissions reduced/avoided annually (measured in tonnes of CO₂ equivalent)

### Clean transportation
Investments in sustainable and efficient transit infrastructure including:

- Rolling stock, infrastructure and vehicles for fully electric or non-motorized public transport
- Infrastructure dedicated to mass public transportation

- Litres of water saved

### Sustainable water management
Investments in facilities and equipment that reduce water consumption or improve the efficiency of resources, including:

- Installation of water efficient products or technologies or xeriscaping/drought-tolerant landscaping
- Projects for collection, treatment, recycling or reuse of water, rainwater or wastewater
- Infrastructure for flood prevention, flood defense or storm-water management

- Litres of water saved

### Access to essential services
Investments in facilities and equipment that enhance access to public, not-for-profit, free or subsidized essential services including:

- Infrastructure for hospitals, laboratories, clinics, healthcare, childcare and elder care centers
- Infrastructure for the provision of child, youth or adult education and vocational training services

- Number of patient beds financed/supported
- Number of families supported

### Issuer’s Responsibility
Sun Life is responsible for providing accurate information and documentation relating to the details of the funded projects, including description of projects, amounts allocated and project impact.

### Independence and Quality Control
Sustainalytics, a leading provider of ESG research and ratings, conducted the verification of use of proceeds from Sun Life’s 2019 Sustainability Bond. The work undertaken as part of this engagement included collection of documentation from Sun Life and review of said documentation to assess conformance with the Framework.

Sustainalytics relied on the information and the facts presented by Sun Life. Sustainalytics is not responsible nor shall it be held liable for any inaccuracies in the opinions, findings or conclusions herein due to incorrect or incomplete data provided by Sun Life.

Sustainalytics made all efforts to ensure the highest quality and rigor during its assessment process and enlisted its Sustainability Bonds Review Committee to provide oversight of the review.
Conclusion

Based on the limited assurance procedures conducted,4 nothing has come to Sustainalytics’ attention that causes us to believe that, in all material respects, the reviewed projects do not conform with the use of proceeds criteria and reporting commitments in the Framework. Sun Life has disclosed to Sustainalytics that the proceeds from the 2019 Sustainability Bond were fully allocated as of 31 December 2022.

Detailed Findings

</table>

4 Sustainalytics limited assurance process includes reviewing the documentation relating to the details of the funded projects, including description of projects, estimated and realized costs of projects, and project impact, as provided by the Issuer, which is responsible for providing accurate information. Sustainalytics has not conducted on-site visits to projects.
### Appendix 1: Allocation Reporting by Category

---

5 Value determined as the value used to carry the asset on Sun Life’s balance sheet as of 31 December 2022. For USD assets, foreign exchange rate of 1.36 was used to translate to CAD.

6 The development was completed in the second half of 2022 as expected and is still expected to achieve a minimum LEED Gold certification.

---

⁷ Avoided GHG emission of the Renewable Energy projects are estimated by multiplying annual renewable energy production (in MWh) by estimated carbon dioxide emissions factors (tonnes per MWh). Sun Life used emission factors for Canada from the tool developed by the Canada Energy Regulator. Reduced emission of the Green Building projects and the Energy Efficiency projects are estimated by comparing with local baseline certification level in tonnes of carbon dioxide or percentage of carbon emissions. Impacts of the Access to Essential Services projects are measured by the number of supported patient beds and available shelter apartments the projects can reach and/or the increase in the share of the population that gain access to the services.

⁸ Sun Life’s share of installed capacity and annual energy generation of this project is 54 MW and 199,397 MWh.

⁹ This figure includes both the projected and actual numbers for the overall category. The projected numbers are calculated based on the guaranteed levels of energy savings once the energy conservation measures are operational for one full year. The actual numbers are calculated on the basis of a measurement and verification report once the project is implemented.

¹⁰ Annual emissions savings are based on the reporting year’s weather, occupancy and utility rates and would be expected to reduce as efficiencies at the property level are realized.

About Sustainalytics, a Morningstar Company

Sustainalytics, a Morningstar Company, is a leading ESG research, ratings and data firm that supports investors around the world with the development and implementation of responsible investment strategies. For more than 30 years, the firm has been at the forefront of developing high-quality, innovative solutions to meet the evolving needs of global investors. Today, Sustainalytics works with hundreds of the world’s leading asset managers and pension funds who incorporate ESG and corporate governance information and assessments into their investment processes. Sustainalytics also works with hundreds of companies and their financial intermediaries to help them consider sustainability in policies, practices and capital projects. With 17 offices globally, Sustainalytics has more than 1500 staff members, including more than 500 analysts with varied multidisciplinary expertise across more than 40 industry groups.
